

Advice 16-2009 of the Scientific Committee of the FASFC on a project of Royal Decree in regard to the sanitary conditions for the production, the collection, the storage, the national trade, the intra-community trade and the importation of embryos of domestic bovine species.

The Scientific Committee makes several comments, of which the most important refer to:

- the traceability, along the whole production and collection chain of the embryos,
- the communication of the necessary information to the embryo production and collection teams, notably information in regard to the sanitary status of the donor animals,
- the samples to be controlled in regard to the quality control
- the embryos originating from animals belonging to herds with IBR I1 status
- the fact that the project of royal decree does not cover the embryo transfer to recipient animals.

The Scientific Committee approves the project of royal decree, provided that the emitted remarks are taken into account.
