

## **Advice 27-2012 of the Scientific Committee of the FASFC on the inspection program of the FASFC**

The Scientific Committee has assessed the inspection program of the FASFC and formulates some remarks.

The Scientific Committee comes to the conclusion that the inspection program takes various elements into consideration, amongst other things the risks of activities in the food chain and the feasibility of the execution of planned inspection frequencies by the control services of the FASFC. A framework is developed in order to structuralize the inspections in the various sectors. It is a favorable evolution.

The Scientific Committee recommends to further elaborate the transparency of the risk based inspection program and to pay attention to the harmonization of the inspection scopes between the different sectors of activity. Also it is recommended that sufficient attention is paid with respect to the content of the follow-up of non-conform results observed in the self-control program of individual operators.
